

Introducing NetVault® Backup 12

WHAT'S NEW IN NETVAULT BACKUP 12?

When disaster strikes — whether it's malware or ransomware; an earthquake, flood or fire; system failure; or human error — you want to feel confident that your backup and recovery plan is rock solid. Quest® NetVault® Backup offers protection for large, complex IT infrastructures — all systems, applications and data — especially when deployed in a hybrid, virtual environment.

As business needs and demands evolve and change, NetVault Backup also evolves to keep pace. Based on valuable customer and partner feedback, the latest release of the Quest backup and recovery solution includes significant enhancements to make it even easier to deploy and manage your NetVault Backup environment while improving virtual server protection, storage performance, efficiency and scalability, system security and control, and catalog search. You also get built-in application-aware SAN snapshot support.

NEW FEATURES

Scaled-up virtualization backup management*

- By enabling the VMware plug-in to run on any available proxy, NetVault Backup now enables you to back up your virtual machines with a single unified view that scales to thousands of VMs. The NetVault Backup solution features a heuristic algorithm that assigns backup jobs across multiple NetVault Backup clients acting as backup proxies.

Application-aware storage array snapshots

- Application-aware SAN snapshots offer significantly easier and faster backups than traditional backup systems. You'll get recovery time objectives (RTOs) and recovery point objectives (RPOs) that are virtually impossible to achieve with a traditional backup system.

Active Directory (AD) support

- **Single sign-on (SSO).** Log into NetVault Backup using your AD logon credentials. Role-based access control regulates what operations administrators can perform (per the AD privileges assigned).
- **Client push install.** Take advantage of AD and LDAP to enable "push install" capability for NetVault Backup clients. This capability is a big plus in large environments with hundreds of clients that need upgrades or installs.

Powerful catalog search

- This state-of-the-art search capability enables fast and granular searches of its backup index for backup and restore. Include fast-search capabilities for metadata (name, mod date, type, etc.) and save-sets with offline indexes in your search results.

State-of-the-art usability

- NetVault Backup 12 introduces more intuitive workflows and efficient navigation. You can now complete many workflows without traveling across several pages. Most operations can be performed from a single screen.
